Encoder Technology receives registration approval for Encodertech®

Encoder Technology has been notified that the trademark Encodertech® is now registered for use by the manufacturer of extremely durable, heavy duty industrial optical encoders.

Encoder Technology products have become the industry standard for stringent oil field equipment requirements, as well as industrial wash down applications. The design of Encoder Technology products enable optical encoders to be used when very high reliability is demanded in extreme applications that include high shock and vibration, wide temperature excursions, and heavy dust, liquid, and vapor environments.

Encoder Technology provides ATEX certified Intrinsically Safe encoders meeting requirements of Annex 11, Part A and B of the ATEX 137 Directive, 99/92/EC and ATEX 100a, 94/9/EC. These encoders often used on Oil Exploration and Petroleum Processing equipment such as Draw Works, also called Drawworks, Top Drives, Power Tongs, Rackers, Mud Pumps, Blenders, Shakers, Centrifuge, Wire Line, Slick Line and other applications where Encoder feedback is required.

Headquartered in Cottonwood Arizona, Encoder Technology designs, produces and markets standard and custom Optical Encoders for use in Oil Exploration, Petroleum Processing, Heavy Rail, Wind Power, Food Processing, Factory Automation, and other extreme duty and volatile applications including Marine, ATEX, and Intrinsically Safe requirements. Visit Encoder Technology on the Web at www.encodertech.com.
